LETTER OF SUPPORT

National Gas Transmission RIIO-GT3 Business Plan

Not legally binding

Energinet are responsible for transporting energy in the form of electricity and methane gas across Denmark. We work closely with National Gas Transmission and after reading the business plan of National Gas we are confident that National Gas' business plan will deliver significant benefits for both current and future grid users, in Britain and across Europe, and thus we are happy to present this letter of support to National Gas' ambitious RIIO-GT3 Plan.

The United Kingdom and Denmark have set ambitious decarbonisation targets to achieve net-zero by the middle of the century. With its business plan, National Gas demonstrates its crucial role in achieving these. The plan outlines National Gas' vision to accelerate biomethane connections, a likely important component of Britain's future energy mix. In Denmark, biomethane connections to the methane gas grid present a significant opportunity for reducing carbon emissions and enhancing energy security. Consequently, we support National Gas' investments in forward-looking initiatives to maintain resilience of supply and to support decarbonisation in line with the United Kingdom's net zero ambitions.

National Gas and Energinet share the strategy on delivering a high service availability, while keeping the customers costs at a low level.

Yours sincerely,

Henrik Gunnertoft Bojsen
