

## Climate Change Hackathon v1

This information model formalises the datasets provided for use at the Climate Change Hackathon organised by Ofgem and Valtch on January 31st - February 1st 2020.

It represents the author's interpretation and makes no claim to completeness or correctness in any wider context.

It does however illustrate how a rigorous and iterate information model for the energy sector in which all entities, attributes and associations have an agreed definition might contribute to a shared understanding of energy data across all the participants in the sector.

Note that where appropriate, entities are tagged with the name of the Hackathon dataset that contained pertinent data.
